Module-3

Session 1

Q.5 Compare your procedural C version and OOP TaskList version: List 3 problems you faced in the C version that were solved by using classes and methods in the OOP version.

Ans.

Three Problems Solved by OOP TaskList Version

1. **Data Management:** In C, task titles and statuses had to be stored in separate arrays. In OOP, the Task class stores both title and isdone together.
2. **Code Organization:** In C, managing task operations could make the code difficult to organize. In OOP, the TaskList class provides separate methods like addtask(), donetask(), and showtask().
3. **Status Tracking:** In C, updating the status of the correct task required careful array handling. In OOP, each task has its own isdone variable, making it easier to mark and display task status.
